You will use Marketclub to help us get a gauge on the strength and general direction of a particular stock...

You will then ONLY place trades when conditions are optimal...

Placing the Trade

Use Marketclub's scanning feature and look for stocks that have...

- Triggered for a Monthly or Weekly trade triangle within the last week
- Has a trend score of 90 - 100 (either positive or negative, it doesn't matter for this strategy)
- Priced \$50 or above (can be lowered to \$35 or above if slim pickings)
- Daily trading volume of a million shares or more

Pull up the stock and look at the 6 month up to a 1 year chart.

If you like what you see go to the option chain and see if you can find a few options to suit your needs.

Be sure to pick an option that has an open interest of at least 100 and then invest roughly \$500 into the trade.

To keep things simple we are trading the at-the-money or slightly out-of-the-money option.

Exit Criteria

Exit anytime after a 50% gain or exit at a 50% loss (give or take).
